## Derating curve

- Note:**
1. 3s max. and the average power is not allowed to surpass rating power
  2. All parameters are measured at 230VAC input, rated load and 25°C of ambient temperature unless otherwise specified.
  3. Ripple & noise are measured at 20MHz of bandwidth by using a 12' twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor.
  4. Tolerance: includes set up tolerance, line regulation and load regulation.
  5. After burn-in 30min
  6. Installation clearances: 40mm on top, 20mm on the bottom, 5mm on the left and right side are recommended when loaded permanently with full power, In case the adjacent device is a heat source, 15mm clearance is recommended.
  7. The ambient temperature derating of 3.5°C/1000m with fanless models and of 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft).
  - 8..Derating may be needed under low input voltage. Please refer to derating curve for more details.
